Title: Find journal articles (Library Clips)
Creator: Swinburne Library

Audio/video for this transcript available from: http://commons.swinburne.edu.au

This video will show you how to find journal articles.

You can use the library search box to find articles on a particular topic. Once you enter your keywords in the library search box, you can limit your results using the menu options. If you need scholarly or academic articles, select 'Peer reviewed'.

To access an article - click 'Access online' and select one of the database links. This will take you to the full text.

If you are looking for a specific article, you probably already have a reference, or citation.

It usually looks something like this.

The citation tells you that the author of this article is 'Y Frumer' it was published in 2018 and the title is 'Cognition and emotions in Japanese humanoid robotics'. It also tells you it was published in a journal called History and Technology in volume 34, issue 2 and on pages 157 to 183.

The quickest way to find this article is to copy and paste the title into the library search box, and click 'Search'. When you have located the article, click 'Access online'. Then click on a database link where the full text is available. You may need to login with your Swinburne username and password.

Another way to find an article is via the A-Z journal list. Go to the library home page and then select 'A-Z Journals'. Type the journal name into the A-Z search box click 'Search' and then select 'Access online'. This will show you all of the databases that have the 'History and Technology' journal. Make sure you select the database that has the year of the journal you need.

Once you access the journal page, follow the links to find the year then the volume and the issue and scroll through to find the article you’re looking for.

If you have any other questions about finding journal articles, speak to a library staff member, contact us online or visit the library website.
